Rs 1.14B net revenue, but margin is eroding as discounts climb

Executive overview · Jan 2024 – Jun 2025 · all values in PKR · margin fell from 28.3% (Q1'24) to 25.6% (Q2'25)

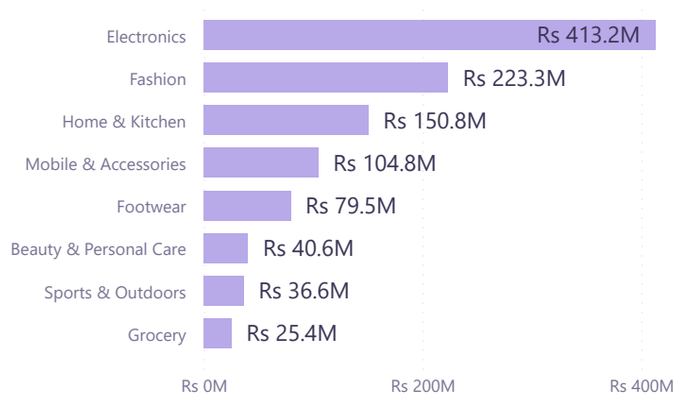

Date range | Category | Region | Seller tier | Customer segment

Rs 1,142.3M	145,331	Rs 8,257	469,749	5.1%	9.2%	31,490	+15.9%

Net revenue (bars) vs margin % (line), by month

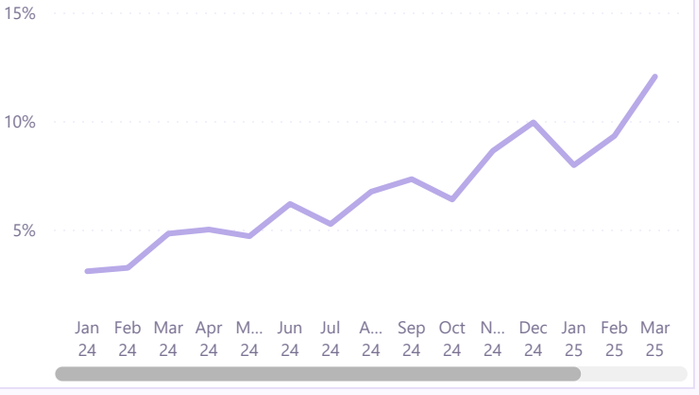

Net revenue by category

NMV by sales channel

Discount % keeps rising

3 actions we recommend

1. Cap blanket discounts. Average discount rose from 3.8% (Q1'24) to 11.1% (Q2'25) while margin % fell 2.7 points.
2. Fix Electronics economics. It is 36% of sales at only 8.5% margin: renegotiate cost and reduce promo depth.
3. Cut COD cancellations (13.9% vs ~4% prepaid) with prepaid incentives, and tackle Size/Fit returns in Fashion and Footwear.

How every number on this dashboard is defined

Definitions, assumptions and data notes

Metric definitions

Gross sales: sum of quantity x unit price, all lines, before discounts and cancellations.
NMV: net amount (after discount) of non-cancelled lines; In Transit is included.
Net revenue: NMV minus refunds on valid (non-rejected) returns.
Margin: net revenue minus COGS of kept lines (non-cancelled, not returned). Margin % = margin / net revenue.
Return rate: returned lines / delivered lines (non-cancelled, not In Transit).
Cancellation rate: cancelled orders / all orders (after duplicate removal).
AOV: NMV / non-cancelled orders. Active customers: distinct known customers with at least one non-cancelled order.

Assumptions and notes

On-time delivery: an order is on time when it shipped in 5 days or fewer (84.7% of orders; the median is 3 days and the 90th percentile is 6).
Seller quality score (0-100) = 35% (1 - return rate) + 30% on-time rate + 20% (1 - cancellation rate) + 15% rating/5. Sellers with fewer than 50 orders are not ranked. Weights are a judgement call.
Shipping days are per order: averaged per order, never summed. Cancelled orders have no shipping, so delivery-time vs cancellation cannot be measured.
Festival comparison uses average NMV per calendar day inside each festival window vs regular days (order period 1 Jan 2024 - 30 Jun 2025).
MoM and YoY compare the latest month in the current selection with the previous month / same month last year, ignoring the date slicer for the comparison month.
Lines with an unknown customer, product, seller or ship city are kept under an 'Unknown' member and shown as 'Unknown' (nothing is deleted).
Source: warehouse schema mart (star schema, built by the Airflow pipeline). Cleaning is done in code, not in Power Query.
